Academic Methodology

The Academic Approach of the courses focuses on the “**work centric**” education i.e. begin with work (and not from a book !), derive knowledge from work and apply that knowledge to make the work more wholesome, useful and delightful.

The ultimate objective is to empower the Learner to engage in **socially useful and productive work**. It aims at leading the learner to his/her rewarding career as well as development of the society.

Learning methodology:

- Learners are given an **overview** of the course and its connection to life and work.
- Learners are then exposed to the specific tool(s) used in the course through the various **real-life applications** of the tool(s).
- Learners are then acquainted with the **careers** and the hierarchy of **roles** they can perform at workplaces after attaining increasing levels of mastery over the tool(s).
- Learners are then acquainted with the **architecture** of the tool or **Tool Map** so as to appreciate various parts of the tool, their functions and their inter-relations.
- Learners are then exposed to **simple application development methodology** by using the tool at the beginner's level.
- Learners then perform the **differential skills** related to the use of the tool to improve the given ready-made outputs.
- Learners are then engaged in **appreciation** of real-life case studies developed by the experts.
- Learners are then encouraged to proceed from **appreciation to imitation** of the experts.
- After imitation experience, they are required to improve the expert's outputs so that they proceed from mere **imitation to emulation**.
